

Trim Truss

From Midland Truss, Inc
with the *Trim Fit I-Block*

- Solid wood Trim Fit I-Block added to the Midland Floor Truss creates a trim-able floor truss of unequaled quality.
- The I-Block can be trimmed up to twelve inches and can be built into one or both ends of the truss.

- Third party testing shows that the I-Block exceeds typical residential loading.
- From our stock to your job site, just-in-time delivery will improve your job deadlines and customer satisfaction.

- No need to wait on foundation measurements or pre-order weeks ahead.
- Eliminates costly mistakes.
- The open web design saves on the required amount of bulkheads and soffits.
- Competitively priced to compete with all sub floor framing options, including stick frame.
- Labor savings will drop to your bottom line

- Because you customize them on the job site—they always fit perfectly!
- Building with the Trim-Truss is fast and efficient. The wider nailing flange allows for better nailing and gluing surface. Faster installation reduces cost.
- Just in Time delivery will put these joists on your job site just when you need them. From inventory to your jobsite, no waiting.
